Asset-Based Telematics™

Apptricity Asset-Based Telematics Reveals What's Inside Each Truck

360° Visibility of Vehicle Loads, 24/7

© Copyright Apptricity 2018

Apptricity asset-based telematics is an integrated mobile solution suite that brings a new level of efficiency to your organization's management and tracking of assets, inventory, work order, field service and warehouse operations.

By streamlining and automating end-to-end field processes, you save both time and money while gaining complete visibility and control, all in real-time.

The asset-based telematics enabled vehicle allows any organization to track its valuable inventory and assets, no matter where they are. Combining easy-to-use software with RFID tags, sensors and GPS, Apptricity provides the 360-degree real-time visibility and 'proof of control' accountability that's missing in traditional GPS telematics. Apptricity offers asset-based telematics as an add-on to your existing fleet tracking software or as a comprehensive, new asset tracking solution.

Apptricity is a leading global provider of IoT and M2M mobile enterprise solutions for supply chain execution.

Optimize Performance

While anyone can talk about telematics, only Apptricity fulfills the promise of this amazing technology in a comprehensive solution that includes patent pending I-Connect™ technology.

The Apptricity I-Connect controller acts as the brain of the asset-based telematics solution. Antennas connect to the controller and track whatever comes in and out of the vehicle. Onboard LTE and WiFi connections enable seamless communication between the vehicle and server. This delivers real-time insights for both drivers and managers alike. The I-Connect controller can communicate with RFID, Bluetooth, GPS, or Satellite tags, making it the perfect solution to reduce manual cycle counting by as much as one-hour a day, while enabling greater efficiency and cost savings, across the fleet.

"Challenged with rising losses in the field, we set out to eliminate manual asset and inventory management. With Appticity asset-based telematics we closed the loop between our field service operations and retail inventory. It significantly reduced equipment loss in the field using RFID technology. It also improved customer service by ensuring field techs had the right equipment on the truck when needed. Thanks to Appticity asset-based telematics, we can now excel, be proactive and continue to make improvements in our customer delivery model."
- National Telecommunications Company

Appticity Asset-Based Telematics Highlights

360° Visibility of Vehicle Loads, 24/7

Know what's on your truck at all times, when equipment leaves and returns. With Appticity asset-based telematics, you can manage trucks, tools, materials and the status of other assets on the road, including personnel — all in real-time.

Directly Track Every Asset and Reduce Shrinkage

The Appticity enabled vehicle lets you automatically track every activity of the team in each vehicle. If expensive tools are missing, you'll have a historical record of when they disappeared and who was responsible for them — helping you both see and prevent shortages.

Scalability and Experience

Appticity software solutions scale to support thousands of fleet service vehicles across multiple locations. Our customers track millions of assets in over 100 countries — so your fleet can work flawlessly, whether it's 5 or 5,000 trucks.

Superior Customer Service

Our customers consistently rate Appticity as "Superior for Technical Support" in independent studies by Dun & Bradstreet. No wonder: in a world of voice recordings and endless online searches, Appticity stands apart with dedicated personal support and frontline expertise — 100% based in the United States.

World Class Accuracy

Appticity telematics has successfully delivered "read" accuracy of greater than 99%, in operational fleet service vehicles. Appticity's real-world experience with deploying RFID ensures your deployment will work the first time — and every time thereafter.

A Complete Solution

Appticity works in real-time with the asset-based telematics enabled vehicle to support:

- real-time asset and inventory tracking with onboard GPS, data and battery management
- reduced field shortages and stockpiling
- significant reduction in misdirected and misplaced assets and inventory
- real-time visibility of items as they are deployed
- complete custodial history of assets and inventory
- smaller and more accurate service windows
- turn-by-turn navigation by work order

Why Choose Appticity Supply Chain Execution Software

- + A uniform interface across all Supply Chain Management functions, boosts employee productivity and satisfaction.
- + Utilization of the latest communications and RFID technologies, combined with patent-pending I-Connect Controller.
- + Asset acquisition costs can be reduced by as much as 10% with Appticity asset-based telematics.
- + Appticity has been delivering Enterprise Supply Chain and Spend Management software solutions since 1999.

Total Integration

Appticity's Integration Engine is a multi-dialect tool enabling our solutions to provide data to, and consume data from, external sources. Integrations can take the form of Web Services, XML, EDI, CSV, vendor specific (such as SAP iDocs), or flat file formats. Appticity also provides pre-built integration connectors for Oracle, SAP, PeopleSoft, Workday, Epicor, JD Edwards, GEAC, and Microsoft Dynamics, as well as many others.

Take a closer look at how organizations like yours are leveraging automated Supply Chain Execution to get ahead of their competitors, make more informed decisions and improve ROI. Schedule a demo today by calling (800) 693-2193.
