

Supply Chain Management Solutions

## Solution Overview

### 360-Degree Visibility, Procurement to Retirement, in the Warehouse and the Field

---

“With this new Supply Chain innovation, our company now offers the ultimate in transparency, efficiency and accuracy — any time, anywhere. We are pleased to make this investment in achieving peak performance for our customers.”

- CEO, Merit

Apptricity Supply Chain Management (SCM) is an integrated mobile solution suite that brings a new level of efficiency to your organization's management of assets, inventory, field service and warehouse operations. By streamlining and automating end-to-end management, Apptricity SCM saves you both time and money while giving you complete visibility and control, all in real-time.

With the ability to customize all fields, screens and menus, Apptricity SCM addresses the needs of organizations of any size. Its sophisticated integration engine connects directly to your existing systems, providing robust cross-functional capability while helping you maximize the value of your corporate resources. Available separately or within an integrated system, the solutions can be deployed in your data center or in the cloud. Apptricity SCM modules include Asset, Field Services, Inventory, Warehouse, and Work Order.

---

Apptricity is a leading global provider of IoT and M2M mobile enterprise solutions for supply chain management and spend management.

### Apptricity Asset

Within Apptricity SCM, the Asset module manages the entire asset lifecycle, including monitoring unused and assigned equipment, and also tracks service contracts and maintenance schedules. Depreciation models are simplified through the system's valuation capabilities.

Apptricity Asset utilizes GPS technology as well as radio frequency identification (RFID) tags and/or barcodes for enhanced tracking and location verification. Location history and complete chain-of-custody records are maintained for every asset. You can accurately account for all assets across each facility and gain immediate access to the procurement-to-retirement lifecycle using real-time data available through any web-enabled device. Scanning assets immediately synchronizes them with our Asset module. In areas without Wi-Fi, users can scan assets and automatically sync the data once a network becomes available.

## Apptricity Field Services

Accessible on any web-enabled device, Apptricity Field Services provides real-time information, making your field operations measurably more effective, efficient and profitable. Fleet personnel across your enterprise have the tools they need to efficiently manage daily maintenance activities in light of the long-term strategic goals of your organization.

GPS technology, as well as RFID tags and barcodes, provide enhanced tracking and location verification, so you never lose track of inventory as it is stored, loaded on vehicles, used or delivered. The solution significantly reduces excessive service calls and ensures that "lost" tools and equipment are no longer an issue. Field Services can also track labor hours for each task, allowing for more accurate billing and business intelligence reporting

Built-in reporting features provide precise analytics to help improve equipment availability, reliability and longevity. In summary, Field Services vastly improves your visibility by closely monitoring fleet maintenance and repair operations, staff assignments, outsourced work, and more.

## Apptricity Inventory

Configurable for remote, depot or other fluid distribution environments, Apptricity Inventory gives you the ability to manage inventory across multiple sites in your supply chain. Personnel can access data supported by a user-friendly interface using any web-enabled device. Users can also perform inventory control processes such as movements, adjustments and receiving and gain real-time visibility across multiple facilities. In addition, the streamlined nature of the system affords a dramatically reduced implementation timeframe, giving you the benefit of a rapid ROI.

## Apptricity Warehouse

Apptricity Warehouse enables you to manage your entire operation — from inbound shipments to inventory control as well as picking and shipping. Specialized tools help minimize lost revenue from stock-outs, spoilage and shrinkage.

The system reduces the need for employee training while it improves support for seasonal workers. The ability to optimize pick locations based on usage frequency accelerates the picking and shipping of products. The solution can be configured to support returns for replacement or repair, enabling recalibration and servicing operations. Integrated yard management capabilities give you visibility into the exact age and location of your trailers and how long each dock door has been occupied. Alerts can be set and sent to warn managers when thresholds are exceeded.

## Apptricity Work Order

From creating and assigning requests to prioritizing work orders, Apptricity Work Order provides all the necessary tools to keep employees organized and management informed. You can include budgeted hours or costs — including markups — with each work order to keep services within budget and to help maintain profit margin.

Jobs are executed with efficiency, in the correct order and according to need. Drag-and-drop functionality allows you to quickly assign new work orders to a specific date and/or employee. Technicians can perform their tasks by using the system on a mobile device. Our solution easily enforces employee accountability. It can ensure timely responses and safeguard work quality, all while contributing to the bottom line, promoting a paper-free process and supporting green initiatives.

**Learn how Apptricity SCM can improve visibility, help you stay ahead of your competitors, make more informed decisions, and increase your ROI.**

**CIO Review recently named Apptricity a Top 20 Most Promising Supply Chain Tech Solution Provider (2017).**
